### Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

### British Library Cataloguing-in-Publication Data

A catalogue record for this book is available from the British Library

### Library of Congress Cataloging-in-Publication Data

A catalog record for this book is available from the Library of Congress

<b>1 Dynamic high-rate tensile characterization of metallic materials with a Kolsky tension bar</b>	<b>1</b>
<i>Bo Song</i>	
1.1 Introduction	1
1.2 Kolsky tension bar design and testing challenges	2
1.3 Dynamic tensile specimen design and mounting method	11
1.3.1 Cylindrical specimen	11
1.3.2 Sheet specimen	14
1.4 Specimen strain measurement and correction	19
1.4.1 Experimental measurements	19
1.4.2 Numerical correction for cylindrical specimens	23
1.5 Pulse shaping in a Kolsky tension bar test	27
1.6 Interpretation of dynamic tensile response of metallic materials	28
1.7 Interrupted Kolsky tension bar experiments	30
1.8 Summary	31
Acknowledgment	32
References	33
<b>2 Dynamic experimental techniques and mechanical behavior of advanced materials in microscale: A comprehensive review</b>	<b>41</b>
<i>Pengfei Wang and Songlin Xu</i>	
2.1 Introduction	41
2.2 Dynamic behavior of a single CNT fiber	43
2.2.1 Rate-dependent behavior under tension loading	43
2.2.2 Penetration behavior of single CNT fiber	50
2.3 Dynamic penetration behavior of graphene membranes	53
2.4 Dynamic compression of CNT foams and microparticles	57
2.4.1 CNT-foam	57
2.4.2 Microcapsule	59
2.4.3 Microscopic direct	62
2.5 Concluding remarks and future prospects	65
References	66

<b>3</b>	<b>Characterization of damage evolution and its influence on mechanical properties of concrete under impact loading</b>	<b>75</b>
	<i>Colin Loeffler and Xu Nie</i>	
3.1	Introduction	75
3.2	Mechanical behavior of concrete	76
3.3	Dynamic loading experimental techniques	77
3.4	Damage observation	78
3.4.1	Observation techniques	79
3.4.2	In-situ observation using X-ray microtomography	80
3.5	Damage quantification	82
3.6	High fidelity modeling of concrete with micro-CT images	92
3.7	Discussion	93
	Acknowledgment	94
	References	94
<b>4</b>	<b>Constitutive behavior of granular materials under high rate of uniaxial strain loading</b>	<b>99</b>
	<i>Huiyang Luo, Huiluo Chen, Runyu Zhang, Yao Ren, Boning Zhang, Richard A. Regueiro, Khalid Alshibli and Hongbing Lu</i>	
4.1	Introduction	99
4.2	Materials and methods	100
4.2.1	Modified long SHPB setup	100
4.2.2	Quasi-static confined compression of sand	101
4.2.3	Preparation of sand specimen	102
4.2.4	Dynamic compression of sand	103
4.2.5	Triaxial stress – strain measurement	104
4.3	Results	105
4.3.1	Mechanical properties of Colorado Mason sand at grain-level	105
4.3.2	Quasi-static confined compression result	106
4.3.3	Axial and volumetric behavior of dry Colorado Mason sand at high strain rate	107
4.3.4	Compressibility of dry Colorado Mason sand	108
4.3.5	Effect of moisture content	109
4.4	Discussion	109
4.4.1	Constitutive law of granular materials	109
4.4.2	Density effect in scaling law	114
4.4.3	Stress level effect	115
4.4.4	Strain rate effect	115
4.4.5	Moisture effect	116
4.4.6	Constitutive law by DEM simulations	119
4.5	Conclusions	120
	Acknowledgments	121
	References	121

<b>5</b>	<b>Nonparametric extraction of the constitutive response of low-impedance materials at high rates</b>	<b>125</b>
	<i>Stylianos Koumlis and Leslie Lamberson</i>	
5.1	Introduction	125
5.2	Material and methods	130
5.2.1	Material	130
5.2.2	Experiments	131
5.2.3	Poisson function	134
5.2.4	Full-field nonparametric analysis	134
5.3	Results and discussion	136
5.3.1	Low strain rate	136
5.3.2	High strain rate	137
	Acknowledgments	145
	References	145
<b>6</b>	<b>Miniature Kolsky bar Methods</b>	<b>149</b>
	<i>Daniel Casem</i>	
6.1	Introduction	149
6.2	Limiting frequency	152
6.3	Specimen equilibrium and inertia	159
6.4	Instrumentation	165
6.4.1	Normal and transverse displacement interferometers	167
6.4.2	Photon Doppler velocimetry	173
6.5	Bending waves	174
6.6	Alignment methods and sample preparation	177
6.7	Conclusion	181
	References	184
<b>7</b>	<b>Impact and high strain-rate tests at high temperature</b>	<b>189</b>
	<i>Martina Scapin and Lorenzo Peroni</i>	
7.1	Introduction	189
7.2	Heating system	193
7.2.1	Indirect radiant heating	193
7.2.2	Direct resistance heating	198
7.2.3	Induction heating	202
7.3	Temperature evaluation system	208
7.4	Machine-sample interfaces	212
7.5	Testing environment	218
7.6	Measurement of forces and kinematics quantities	221
7.7	Image analysis and optical methods	224
7.8	Other high strain-rate tests at high temperature:	
	Taylor and Flyer plate impact tests	228
	References	232

<b>8</b>	<b>Moisture effect investigation on the dynamic fracture behavior of unidirectional and woven carbon fiber/epoxy materials</b>	<b>237</b>
	<i>R. Chavez Morales and V. Eliasson</i>	
8.1	Introduction	237
8.2	Material	237
8.3	Experimental setup	239
8.4	Results	242
	8.4.1 Unidirectional samples	242
	8.4.2 Woven samples	244
8.5	Conclusions	252
	Acknowledgments	252
	References	252
<b>9</b>	<b>Simultaneous full-field strain and temperature measurements in high strain rate testing</b>	<b>255</b>
	<i>Guilherme Corrêa Soares, Naiara I. Vázquez-Fernández and Mikko Hokka</i>	
9.1	Background	255
9.2	Challenges in simultaneous full-field deformation and temperature measurements	260
9.3	Spatial and temporal synchronization	261
9.4	Simultaneous full-field deformation and temperature measurements at elevated temperatures	265
9.5	Temperature calibration	267
9.6	Presenting the full-field data	270
9.7	Taylor–Quinney coefficient	274
9.8	Limitations and possibilities of the method	276
9.9	Summary	280
	References	281
<b>10</b>	<b>Investigating fracture mechanisms in opaque materials under dynamic loading using high-speed synchrotron X-ray imaging</b>	<b>285</b>
	<i>Niranjan D. Parab</i>	
10.1	Introduction	285
10.2	Methods	286
	10.2.1 Dynamic loading systems	286
	10.2.2 Synchrotron X-ray phase-contrast imaging	289
	10.2.3 Synchronization of the Kolsky bar and the X-ray PCI	294
10.3	Representative results	296
	10.3.1 Dynamic behavior of granular particles	296
	10.3.2 Dynamic behavior of polymer-bonded explosives	302

10.4	Future directions	307
10.5	Summary	308
	Acknowledgments	308
	References	308
<b>11</b>	<b>Energy analyses in Kolsky bar experiments</b>	<b>315</b>
	<i>Bo Song and Brett Sanborn</i>	
11.1	Introduction	315
11.2	Time-based energy analysis for a Kolsky bar experiment	319
11.3	Frequency-based energy analysis for a Kolsky bar experiment	321
11.4	Specimen strain energy analysis for a Kolsky bar experiment	323
11.5	Experimental verification of energy analyses	324
11.6	Applications of energy analysis in the time and frequency domains	331
	11.6.1 Energy analysis for shock mitigation materials	331
	11.6.2 Energy analysis for an interface problem	337
11.7	Conclusions	341
	Acknowledgment	341
